

# Start a new era of iFL-2000 Forensics Commander

# SMART FORENSICS

Integrated all computer and mobile forensics functions, combination with modular hardware design & professional forensic software provides an all-in-one solution as a small forensics lab. With smart forensics inside, investigators can customize his work flow from beginning to end, fulfill heavy load and complicated work requirement more efficiently and automatically. Following the regulation-abiding guidance, all analysis result will be recorded in report. Forensic Commander will lead you to experience a new compatible, complete and comfortable work style!

## Integrated Forensics modules

With all necessary forensics modules integrated, forensics hardware, preinstall professional forensics software, high performance workstation and touch screen panel, all of them consisted make Forensics Commander more like a small forensics lab.

## Smart Forensics

Apply automated forensic tasks with customizable "drag and drop" procedures. Investigators will no longer be occupied by manual operations, but focus more on data analysis instead.

## Built-in workflow

The workflow and regulations of digital forensics are built within the work process which reduce the workload as well as errors.

## Human Engineering design

Human oriented design provides a comfortable and friendly experience when a forensics work is executed.

Write-block ports (IDE/SATA/USB/Memory Cards)

Write-block hard disk (SATA/SAS) slots

Max 6 smartphone parallel forensic support

Drag & Drop operation

Wide display with multiscreen design

Powerful workstation

Evidence snapshot

### Friendly and easy to use

The touch screen supports drag & drop; operations are eased by guidance

### Parallel processes

Supports parallel processing up to 8 storage media and 6 mobile phones, greatly improving work efficiency

### Modular design

Integrated all mature forensics technology & products, easy to maintenance and update

### Platform mode

The integrated hardware provides support to software interaction and automatic data transmission, while the integrated software introduces a future of smart application for digital forensics
